SUMMARY

I'm a final-year Digital Systems student with experience in customer support and a strong foundation in software development and networking. I have expertise in HTML, CSS and Python with academic exposure to networking and Agile Methodology. Through my experience from Customer Support I gained the ability to manage high-pressure, client-facing environments as a Premium Agent at Nova, demonstrating strong communication and problem-solving skills. I'm seeking an entry-level IT or software role where I can apply my technical skills and continue to grow professionally.
